EXPERIENCE

PEI Bag Company, PEI, Software Developer Intern, 2020 Summer

- Maintained and updated company website by revising the backend database so that it corresponds with the frontend of the
 website.
- Gained experience working with WordPress.
- Developed a marketing strategy, digital signage, and social media presence.
- Used Syspro to make price adjustments and data entry and to modernize inventory system.
- Updated and revised the company health and safety manual.

LOCKITDOWN

- Day planning app that outputs the most efficient order to complete daily tasks and automatically incorporates them into your google calendar using google API.
- GUI built using Python's tkninter, backend was done using a priority queue with priority being based on category and urgency of given task.

New York Crime Tracker

- In a group of five, we used a NYPD dataset to develop a program that would allow tourists to avoid crime hotspots when traveling through New York.
- Used Dijkstra's Algorithm and Breadth-first Search.

Tetris Game

- Used JavaScript to recreate the classic game Tetris.
- Developed the software to recognize a game grid with predetermined shapes flowing down.
- Implemented a UI and different game modes as well as a scoring system.

McMaster Student Hub

- In a team of four we created a McMaster student website using React.
- Website provided a GPA Calculator, Prerequisite Checker, Financial Calculator, and Property Reviews
- I was in charge of developing the Prerequisite checker which would gather all of a students' completed courses through a transcript parser then cross-reference them with the required courses for certain masters program
